

FACULTY OF INFORMATION TECHNOLOGY

UNIVERSITY OF MORATUWA, SRI LANKA

FOUR - WEEKLY CONTINUOUS ASSESSMENT REPORT SHEET

(To be submitted Four-Weekly (Every four weeks) to the Training Division and a total of 6 reports are expected by the end of training)

Refer also page 6 of Training Handbook

1. Name of Undergraduate (as appearing in the Undergraduate Register at the University)	Jasar A.L.M.A																			
2. Undergraduate Registration No.	2	0	4	0	7	9	H													
3. Address, Phone Number and E-mail contact details during training	Sanchi Arachi Garden Road, Colombo - 12																			
	0	7	6	6	4	4	5	3	8	6	aljasarmuhammed@gmail.com									
4. Training Stage ⁽¹⁾	Level 3																			
5. Overall Training Period	From								To											
	0	8	/	0	4	/	2	0	2	4	2	2	/	0	9	/	2	0	2	4
7. Name, Address and Phone No. of Training Establishment and Officer in charge of Undergraduate	M.H.A.Shiyam Senior Manager (IS) Sri Lanka Ports Authority																			
	0	7	1	8	5	3	1	7	2	1										
8. Report for four (4) week period	From								To											
	Week #				1				Week #				4							
	0	8	/	0	4	/	2	0	2	4	0	5	/	0	5	/	2	0	2	4
9. Details on Undergraduate's:																				
9.1 Work ⁽¹⁾	Excellent				Good				Satisfactory				Poor							
9.2 Conduct ⁽¹⁾	Excellent				Good				Satisfactory				Poor							
9.3 Attendance ⁽¹⁾	Excellent				Good				Satisfactory				Poor							
9.4 Days of leave during month	Authorised								Unauthorised											
9.5 Comments by Engineer / Officer in charge of Undergraduate	quickly adapted to the project and demonstrated a solid understanding of the system requirements. He showcased strong initiative in implementing key features and worked well with the team.																			
9. Signature, Name and Official Seal of Engineer / Officer in charge of Undergraduate	M. H. A. SHIYAM SENIOR MANAGER (IS) INFORMATION SYSTEMS DIVISION SRI LANKA PORTS AUTHORITY COLOMBO - 01 																			

During my first month at the Sri Lanka Ports Authority (SLPA), I had the opportunity to work on the development of an attendance system using fingerprint devices while gaining a deeper understanding of both technical skills and the workplace environment.

The month began with a warm welcome, including an introduction to the team and a formal meeting with the Chief Manager of the Information Systems (IS) Division. I was assigned two supervisors who provided guidance and mentorship throughout the project. This welcome phase helped me settle into the organization, learn its structure, and get familiarized with the tools and systems they use.

Once my project was assigned, I gathered the full system requirements and began working on the attendance system. I focused on developing a user-friendly Super Admin dashboard for managing user roles, access controls, and system functionalities. This project taught me important lessons in front-end development, including creating responsive interfaces that work seamlessly across various screen sizes. I also learned to effectively communicate project ideas and progress with my supervisors, ensuring that the development aligned with the organization's goals.

A key part of my work was implementing the login and registration pages, with a focus on secure authentication and validation. This involved using session management for secure login handling. I set up the database schema to store attendance records, which involved creating tables for users, roles, and logs, and managing foreign key constraints to ensure data integrity.

Also, I learned how the fingerprint devices work, including how they capture and transmit biometric data to the main database through the VM server. This hands-on experience with hardware integration broadened my knowledge of combining software solutions with real-world devices.

Implemented CRUD operations for user management, set up roles like Super Admin, Administration, Admin Clerk, and Clerk, and learned to create a default login for the Super Admin role using session variables. Creating flowcharts and EER diagrams helped me better

understand system design, and I gained confidence in presenting and explaining these designs to my supervisors.

Lastly, I learned the importance of version control by regularly updating the project on GitHub, ensuring that all progress was tracked and managed efficiently.

Overall, this month provided a well-rounded learning experience, allowing me to build both technical and professional skills, from system design and database management to effective team collaboration and project communication.
